VAV TERMINAL APPLICATION KIT

LIOB-585 VAV / LIOB-595 VAV

Configurable control for more VAV applications

The LOYTEC VAV solution combines a predefined Terminal Unit Application with flexible terminal-control hardware. Available through Distribution Partners, it helps integrators cover more box types with one familiar application and less manual setup.

Default parameters and automatic I/O allocation help reduce commissioning labor. Dedicated balancing access lets the TAB contractor work independently, while software reassignment of compatible I/O helps avoid physical rewiring.

Key Features

+ One Application for More Box Types

Multiple predefined configurations across cooling, parallel fan, series fan and dual-duct boxes.

+ Less Time Commissioning

Defaults, automatic I/O mapping and device detection simplify setup. Reassign compatible points in software.

+ Independent Air Balancing

Provide dedicated BalanceTool access or balance through an L-STAT when fitted and enabled.

+ Open and Secure Integration

BACnet/IP and BACnet/SC support BAS integration, including eWEB. OPC connects to LWEB-900.

Less field work. More control.
