

UNO IAQ Monitors

Connected. Smart. Healthy.

UNO Indoor Air Quality (IAQ) Monitors provide real-time information on harmful indoor air factors. The detection range, depending on the model, includes Carbon Monoxide (CO), Carbon Dioxide (CO2), Total Volatile Organic Compounds (TVOC), Fine Suspended Particulate Matter (PM2.5), Suspended Particulate Matter (PM10), Formaldehyde (HCHO), and Ozone (O3).

According to researchers, during 90% of the time we spend indoors, the unhealthy air factors such as volatile organic compounds, suspended particulates, mold, enter our trachea and lungs invisibly, increasing our risk of respiratory diseases and reducing our immunity.

Application fields cover office, education, public places, healthcare, and residential buildings.

**Protect your health and wellness.
Start with indoor air quality.**

Key Features

- Real-time monitoring of Indoor Air Quality.
- RESET certified.
- Tested for compliance with Delta Controls system.
- Models with BACnet, WiFi, Modbus communication.
- Units with LED indication of IAQ status, with and without display.
