Red**5** Plus Room

Total Room Integration

The Red5 Room Controller is DIN rail mountable and combines modular I/O with room-level integration.

Red5 is a complete solution that combines HVAC, access and lighting control in a modular system. It combines multiple protocols and I/O points in one unit.

Control multiple rooms. Integrate with multiple systems.

Key Features

Universal I/O
No more inputs and outputs. Use universal points to control or read from field equipment. Reduce engineering and product costs by being able to use every point on the board.

Excels at controlling multiple rooms
Control HVAC, access and lighting with just one system.
