

Cloud Engineering

Create Networks of Virtual Controllers in The Cloud.

Sending an engineer to a site is expensive. Most engineers finish, test, and troubleshoot their programming and graphics links onsite. Why? Because it's the only place where the entire network is available. Host multiple controllers at once, then finish and test all programming and graphics before going on site.

Save the driving time, mileage, and other costs, for one site visit, for one engineer, each month. Plus, no "wall of controllers." No wall means no need to purchase expensive controllers, no electricity costs, less time spent rewiring controllers and your office stays neat and tidy.

Key Features

- + Availability**
Program or work on graphics from anywhere with an internet connection with unlimited users per account for one price.

- + Faster Project Cycles**
Finish programming your controllers and pass the virtual site over to the graphics developer while you start up another site and continue programming.

- + Increased Collaboration**
All virtual sites are accessible to all team members at the same time. Finish a job that another engineer started, or work with your entire team to complete a large project.

Spend less time on site, reduce costs and become more efficient.
