Delta Intelligent Building Technologies

LOYTEC
A Brand of Delta

VAV TERMINAL APPLICATION KIT

One controller. More VAV box types.

LIOB-585- VAV & LIOB-595- VAV

Less field work. More control.

Fewer models to manage

Support cooling, parallel fan, series fan and dual-duct boxes with one configurable application. Reduce box-specific model variations to stock and learn.

Less time commissioning

Default settings and automatic I/O allocation help reduce setup labor. Reassign compatible points in software to help resolve assignment errors without rewiring.

Balance independently

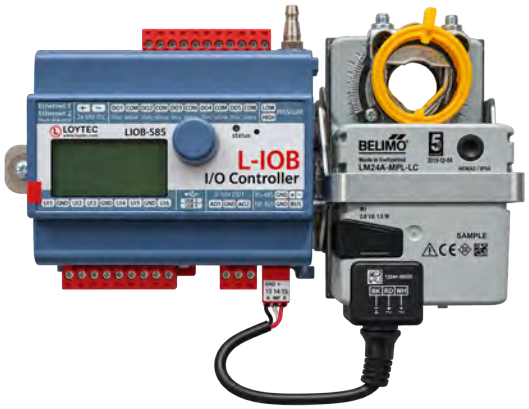

Give the TAB contractor a dedicated BalanceTool project, helping reduce integrator involvement. Balance through an L-STAT when fitted and enabled.

Connect your way

Choose BACnet/IP or encrypted, authenticated BACnet/SC. Integrate with eWEB through BACnet objects or with LWEB-900 through OPC.

Standards-based control. Broader project potential.

Functions support ASHRAE G36, 55, 62.1 and 90.1, and California Title 24 requirements. Configure and verify the complete system for the specified project and code edition.

Proven in US installations.
Now available through Delta IBT Distribution Partners.
